PROJECTS

Family Hub

- Contributed to the Family Hub project by developing the Family Handbook module.
- This platform enables users to create a personalized handbook for their family, featuring modules for a cover page, introduction, family member profiles, vision and mission statements, constitution, summary and etc.
- Users can select from various templates and designs to customize their handbook.
- The project includes generating tailored, written documents that reflect family identification and values, with the final product being a professionally formatted PDF generated from the backend.

Pharma Career Hub

- Developed a job aggregation platform for the pharmaceutical industry that scrapes job listings from LinkedIn, Indeed, and other pharma-specific job boards.
- The data is stored in a database and updated daily through a cron job.
- An admin panel was also created, allowing administrators to add or remove job postings, manage registered users, and view comments on the jobs listed on the platform.

Super Friday (Ecommerce)

- Built an e-commerce platform supporting multi-user registration for buyers and sellers.
- Integrated Stripe for secure online payments, ensuring smooth and safe financial transactions.
- Created an admin panel for user management, product oversight, and transaction monitoring, enhancing administrative control.
